To Whom It May Concern:

This letter is in regards to FCC File number: SAT-MOD-20101118-00239.

Please continue to allow GPS to be the only signal reception. Government agencies, contractors, citizens and transportation specialists utilize GPS signals on a daily basis. Company work flows are already in place for utilizing GPS with GIS (Geographical Information Systems). By allowing another technology to develop, companies will lose hundreds of thousands of dollars to re-establish with another type of product. Also those companies who continue to use GPS while another radio signal is interfering will not be able to obtain information as accurately and may waste additional money by having to resend employees into the field to continually collect data if it is not done properly the first time.

The United States system has relied on GPS and continues to rely on GPS. Please consider how important to the economy and current workflow of many fields (such as Engineering, GIS, Planning, Water, Utilities, Transportation and Retail) relies on what the GPS system provides.

Please vote to not allow any other technology that would interrupt the GPS signals in the United States.

Thank you for your time.

Best Regards,

Kimberly D. Dodson, GISP, AVS
